

CS301 Database Project
Fall Semester 2019
Version 1.1
GroceryBama.com

Look at the last page for edits made for each version. Please read the entire description of the project before starting to work on it.

Purpose of the Project

Analyze, specify, design, implement, document and demonstrate an online system for a grocery delivery service at GroceryBama.com. You are required to use the classical methodology for database development. The system should be implemented using a relational DBMS that supports standard SQL queries. The professors must approve any other alternative implementations. ***In no circumstances can you use a tool that automatically generates SQL or automatically maps programming objects into the database. You also cannot use any other software like Access.*** Ask professors or TA if you have doubts in which tools/languages/software are allowed.

Project Phases

The three phases of the project cover the work processes from the Classical Methodology for Database Development (see notes on Blackboard under Resources).

Groups

Project groups may have 3 or 4 members. Groups of more than 4 or less than 3 will **NOT** be allowed. A group may remove a member from further participation in the group when Phase I is turned in or when Phase II is turned in. A written notification with a proper justification must be provided to the professor and the TA at that time in hard-copy form.

Deliverables

Phase I (Electronic copy and hard copy)

Deadline: September 22

The deliverables include:

1. A cover page listing all members in the team with their respective sections, UA official email addresses and UA usernames.
2. Enhanced Entity Relationship (EER) Diagram
3. A list of logical constraints that will be enforced. Do not include any constraints that can be shown in the EER diagram, but rather semantic, business logic related constraints. You are required to include at least three constraints, although a fully-specified system will probably have more than that. **Constraints that can be specified directly using EER notation will not count towards the three required.** Constraints related to data type are not accepted as constraints.
4. Any assumptions made with explanations.

Notes:

1. The EER must capture the constraints of the system as much as possible whenever applicable, i.e. total participation, super/sub class, weak entities.
2. The design of your system must satisfy all the constraints. You are allowed to make up additional assumptions and constraints as long as they do not conflict with the specified constraints and requirements. If possible, those additional assumptions and constraints should be included in the EER diagram. You must list all your assumptions and constraints; otherwise TA would mark your EER diagram wrong since they would not be able to know you have made your own assumptions.

Each group needs to turn in one hard copy (only one for the entire group), and each group member should upload an electronic copy on Blackboard individually. You will receive -5 penalty if you do not submit an electronic copy. Group numbers will be assigned to the groups after they are declared in Phase 1. **Please write down your Group Number clearly on all subsequent submissions.**

Phase II (Soft copy and hard copy)

Deadline: October 28

The deliverables include:

1. A cover page listing all members in the team with their respective sections, UA official email addresses and Blackboard usernames, **and group number** assigned in phase 1. **If you don't write your group number on the cover page, we will deduct 5 points.**
2. Copy of the EER Diagram (either from phase I (with any revisions) or from the solution provided)
3. Relational Schema Diagram (Identify primary and foreign keys and show referential integrity using arrows)
4. Create Table statements, including domain constraints, integrity constraints, primary keys, and foreign keys.

Note:

1. **Only one hard copy** should be turned in for the entire group, and each group member should upload an electronic copy on Blackboard individually. You will receive -5 penalty if you do not submit an electronic copy.

Phase III (Soft copy and hard copy)

Electronic Submission Deadline: December 1 (prior to first demonstration)

Project Demo Dates: December 2, 4

The electronic deliverables include:

1. A cover page with the **group number** and the group members' names.
2. A text file with all SQL statements for each task (follow the template in the phase II design methodology)

Note: A set of SQL statements may be required in order to complete one task. However, in such cases, the last SQL statement should show the output according to the specification. Views and nested queries may be used to support the tasks.

3. For heavy weight option, you also need to submit your source code. You need to develop the entire application as a stand-alone application including the front end, menu options and the control flow. The application must have all functionalities described in this document. The TA must be able to run the application without assistance from the students.

Note: Prior to the demo, the TA will give guidelines for populating the database with data. The database has to be populated with this data set prior to the demo.

You need to submit your electronic copy of phase 3 to Blackboard by December 1 before the first demonstration. Each group member should upload an electronic copy on Blackboard individually. You will receive -5 penalty if you do not submit an electronic copy.

On demo day:

Bring your laptop and make sure you have a text file on your laptop with all your SQL queries just in case your application does not work. More details about demo will be discussed later this semester.

Grading

The project will consist of three phases (deliverables) as well as a final demo to the TA.

Phase I and Phase II of the project are each worth 10% credit.

Phase III (10% for light-weight, plus 5% extra credit for heavy-weight):

Lightweight option (10%): The students would be required to demo the SQL queries on the MySQL console.

Heavy Weight Option (extra 5%): The students would be required to use the embedded SQL feature of MySQL which allows you to embed SQL statements in a standalone application.

GroceryBama.com is a grocery-to-home delivery service. There are three types of users: *buyers, deliverers, and managers.*

The following sections contain a functional description of the system along with some mockup screens. Each section would explain a particular functionality and then present an example screen about it. **You don't have to follow the UI designs, but your program needs to support all the functionalities.** These mockups are just for helping you to understand all the functionalities. A complete reorganization of the user interface is permissible as long as your application supports all the functionality listed below. The sections have been grouped by customer's functionalities and managers' functionalities.

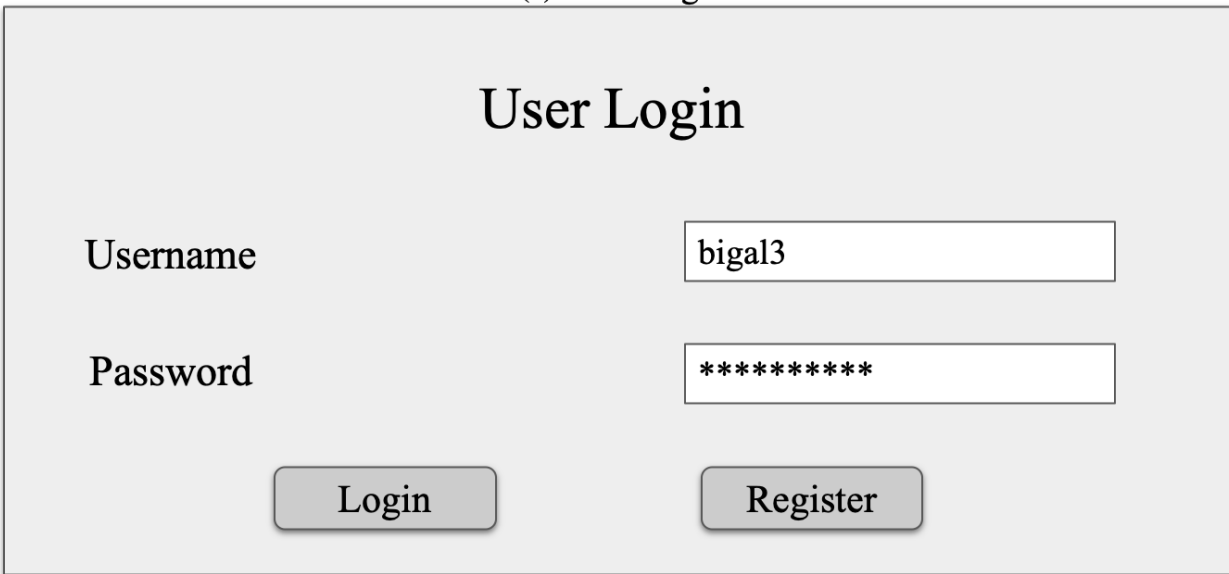

For heavy option, you may implement the project as a traditional standalone application (e.g., using Java GUIs) or as a web application (e.g., using a web scripting language like PHP). There is no restriction on the choice of language (e.g., Java, Python, Javascript). We will also send an announcement about which languages/tools/software/platforms are allowed later this semester. (Ask the professors for permission if in doubt.)

Initialization Functionality

Log In

Screen 1 shows the login screen. All users must login before using this application. A valid username and password combination is required. If the user provides invalid login credentials, an error message should be shown on the screen. If the user does not have an account yet, the user can click on the register button to create an account.

(1) User Login

The image shows a mockup of a 'User Login' screen. It has a light gray background. At the top center, the title 'User Login' is displayed in a large, bold, black serif font. Below the title, there are two input fields. The first is labeled 'Username' in a bold black serif font, and it contains the text 'bigal3'. The second is labeled 'Password' in a bold black serif font, and it contains a series of ten asterisks '*****'. Below these fields, there are two buttons: 'Login' on the left and 'Register' on the right. Both buttons are gray with rounded corners and black text.

Screen 1 User Login

Notes

- All users must login before using the application
- Username is unique for every user
- All users must be directed to the correct functionality screens after successful login
- All users share the same login screen
- Username and password combinations must exist in the database in order for a successful login
- New users must register before login

New User Registration

After clicking the register button in Screen 1, the user will be directed to the new user registration page where the user needs to indicate what type of account they are creating between buyer, deliverer, or manager (Screen 2).

To register a buyer account (Screen 3):

- The system needs to verify that all fields are filled, Username is available, and Password and Confirm Password are the same. Email address does not have to be unique but valid. An error message should be shown if any of these requirements fails. All these requirements also apply to creating deliverer account or manager accounts.

To register a deliverer/manager account (Screen 4/5):

- The user needs to have Deliverer/Manager Password in order to create a deliverer/manager account. (Hence only people who know the deliverer/manager password can create deliverer/manager accounts.) The system also needs to check if the deliverer/manager code is correct.

Notes:

- Email is **not unique**. This way a user has the ability to sign up to be both a buyer, deliverer, and/or manager if the user has the necessary credentials. However, the Username must be **unique**.
- Hint: You could have a 'System Info' entity in the database to store system information, such as the deliverer/manager code.

(2) Register Navigation

Email	bigal3@crimson.ua.edu	State	AL
Address	245 7th Avenue	ZipCode	35487
City	Tuscaloosa		

Back Register

Screen 3 Buyer Registration

Notes

- All fields are required
- Username is **unique**
 - Could have more than one account per email, e.g. if uses is deliverer and buyer
- *Password* and *Confirm Password* must match

- Email format must be:
 - alphanumeric values + “@” + alphanumeric values + “.” + alphanumeric values
- *Phone* is a 10-digit number
- *Zipcode* is a 5-digit number
- Account type will be “Buyer”
- Throw an error if any of these requirements are not met

(4) Register Deliverer

Register Deliverer

First Name	<input type="text" value="Big"/>	Last Name	<input type="text" value="Al"/>
Username	<input type="text" value="bigal3"/>	Confirmation Code	<input type="text" value="123456"/>

Screen 5 Manager Registration

Notes

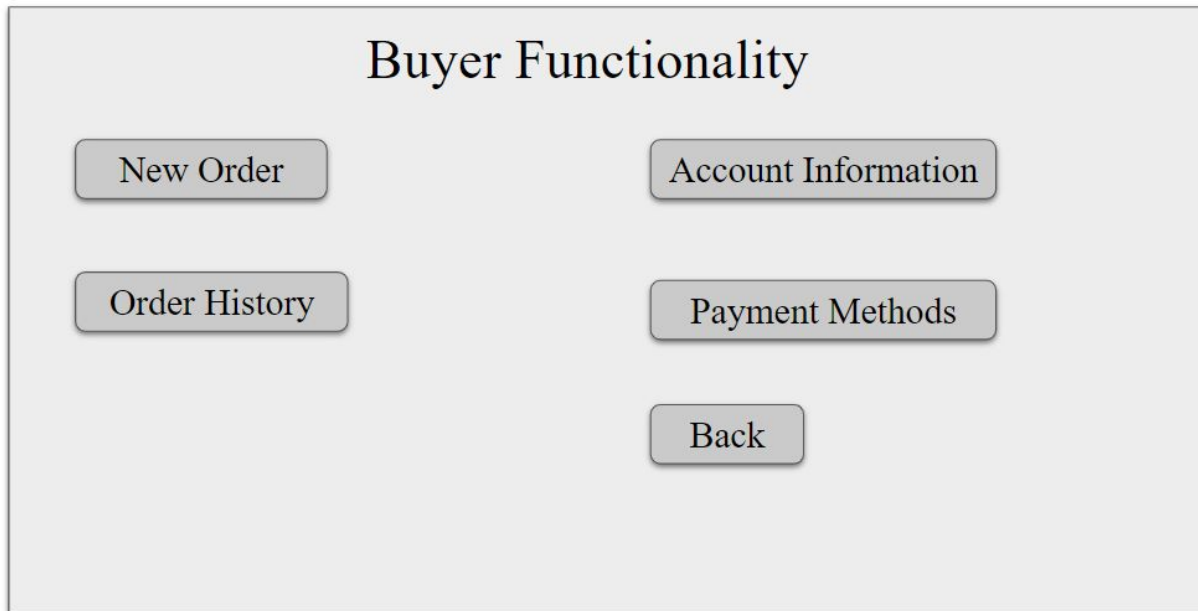

- Confirmation code required to register as a deliverer/manager
- Assign a store as a requirement

Buyer Functionality

Buyer Home Page

After logging in as a Buyer, the user will be taken to the Buyer Home Page (see Screen 6). This page lists Account Information, New Order, and Order History.

(6) Buyer Functionality

Screen 6 Buyer Functionality

Account Information

On the Buyer Home Page page, there is an Account Information button. Clicking on this button, the buyer will be directed to Account Information page (Screen 7), where the user can view saved card credit card information (account number and routing number), saved preferred grocery store (name, address), phone number, and buyer address (building number, street, zip code, city, and state). This information should have the functionality to be updated with a Manage Buyer Profile page.

<input type="radio"/> Sam's Club	1401 Skyland Blvd E, Tuscaloosa, AL 35405	(205) 750-8559	8 - 4
<input type="radio"/> Walmart	1501 Skyland Blvd E, Tuscaloosa, AL 35405	(205) 750-0823	9 - 8

BackPreviousNextChoose

Screen 8 Store Homepage

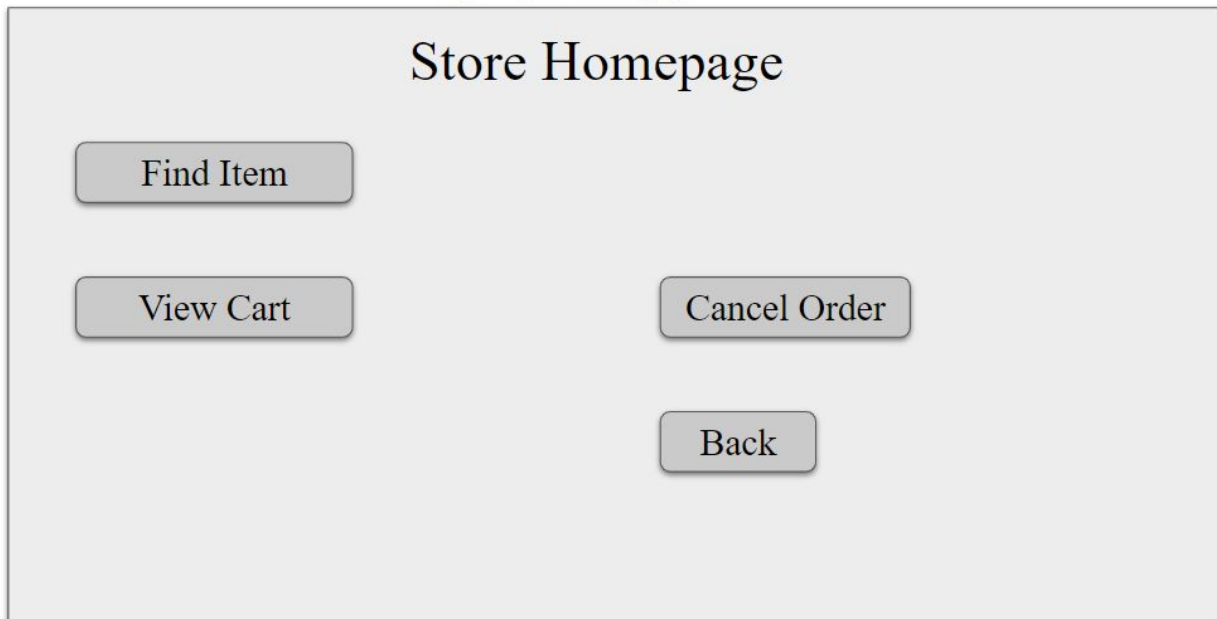

Notes

- Order by store name functionality
- *Back Button* navigates to New Order page
- *Previous Button* navigates to previous 5 stores
- *Next* navigates to next 5 stores
- Must have selected a store to click *Choose*
 - The user can only select one store at a time

After the store is selected, the buyer should be brought to a page that has look up for items in that store listed by type of item (Screen 9/10/11). Type of items include: **Beverages, Baking Goods, Canned Goods, Dairy, Frozen Foods, Meat, Produce, Cleaning Products, Personal Care, Others**. A list should be populated by the item search that contains the following information: Name of Item, Quantity (remaining in the store), Store Price, Expiration Date, and

Small Description of the Item. The buyer should then be able to add the item to their 'Cart.'
When the buyer is ready, they should be able to click a button that says 'Checkout.'
